SUMMARY

Passionate Full Stack Developer with hands-on experience in JavaScript, modern web technologies, and building production-ready, scalable web applications. Skilled in architecting relational databases and designing clean, efficient backend systems. Driven by a passion for engineering high-performance, resilient systems that go beyond simple applications to deliver real-world impact.

EDUCATION

B.E in Information Science and Engineering

Amruta Institute of Engineering and Management Sciences

2023 – 2027

Bidadi, Bengaluru

SKILLS

Programming	Java, Python, JavaScript, C/C++
Frameworks	Node.js, Express.js, React.js, Next.js, Tailwindcss
Databases	MySQL, MongoDB, NeonDB(PostgreSQL)
Tools	Git, Github

SOFT SKILLS

- Problem Solving
- Team Collaboration

EXPERIENCE

Product Development Intern - Yuvamytr

Yuvamytr

02/09/2024 – 01/03/2026

Bengaluru, KA

- Spearheaded the end-to-end development of highly responsive, full-stack web applications, leveraging React.js and Tailwind CSS for the front-end alongside Node.js and MongoDB for scalable back-end architecture.
- Engineered and integrated robust RESTful APIs to facilitate seamless data flow, while conducting rigorous testing and debugging protocols to ensure optimal application performance and a flawless user experience.

PROJECTS

NexusCloud Pest Risk Agent

IBM watsonx.ai, Langflow, IBM Cloud

- Built Agentic AI models for pest risk prediction and smart farming decision support.
- Developed AI workflow agents using Langflow to process environmental and crop datasets.
- Implemented early pest detection system with preventive recommendations.

Investigation on Educational Access, Satisfaction & Outcomes

Next.js, PowerBI

- Analyzed student data on education access, satisfaction, and outcomes using Power BI.
- Created interactive dashboards to clearly show trends and insights.
- Built a frontend using Next.js to display the data in a user-friendly way.

Air Quality Monitoring System

C++, Arduino, ThingSpeak

- Developed an IoT-based air monitoring system to measure temperature and humidity.
- Integrated DHT11/DHT22 sensors with Arduino/NodeMCU for real-time data collection.
- Programmed the system using C/C++ for sensor interfacing and data transmission.
- Used ThingSpeak cloud platform to upload and visualize real-time environmental data.

CERTIFICATIONS

- Foundation Course on Green Skills and Artificial Intelligence - Edunet Foundation, AICTE and Shell India
- IBM Cloud & Langflow - Edunet Foundations
- Microsoft Azure - Microsoft Learn in collaboration with FICE
- Advanced Python - Alpha Tech Academy
